2. Procedure

2.1 Procedure

Title:	Turnkey delivery and maintenance of a combined multilayer blown and cast film system
Description:	The contract will comprise the procurement of a suitable co-extrusion film blowing line and on-site installation thereof. The Sustainable Chemistry & Technology group within Wageningen Food & Biobased Research conducts application focused (contract) research, aiming to develop chemicals, polymers, and plastic products with a particular focus on improving sustainability aspects to help decrease the environmental burden related to plastics. The developed materials are typically recycled, biobased, biodegradable, or combine multiple of these approaches. A key element in such development projects is processing plastic granulates into products, using processing methods such as sheet extrusion, film casting, film blowing, injection moulding, thermoforming, hot pressing, etc. This type of work requires equipment to be very flexible in terms of materials, processing conditions, and volumes. The currently operational film blowing line is an example of such a piece of equipment. With this line, we can produce multilayer films at a scale large enough to get insights that are relevant for scaling up a formulation to a commercial production process, but small enough to require a manageable amount of materials (range ~15 kg/h – 50 kg/h). to the extent that the budget allows for, the offered line should provide the opportunity to produce multilayer cast films. It is acceptable to use the existing 200 mm die and 230 mm wide take-off line as downstream equipment for cast film production. It is also acceptable to include all devices required for multilayer cast film production within the tender.
