

The following additional work has to be done on server side when persisting / updating the imported ECO account:

- write field "status_code1_modified"
- write field "created"
- write field "batch_modified" (as "null")
- write field "txn_modified" (as "null")
- write field "user_modified" (equal to "created")
- write field "update_user" ("masterdata_import_api")
- write account limit as child record into "pa_credit_lim_or"

2.1.3.3 Element <card>

In the scope of the master data import API **an ECO card can only be deleted, but not inserted or updated.** This is in accordance with the AS GUI. Thus for the element "processmethod" the value "delete" is valid only.

The following additional work has to be done on server side when deleting the requested ECO card:

- write field "deleted" (equal to current date)
- write field "user_modified" (equal to current date)
- write field "update_user"
