Design, manufacture, delivery and assembly of various Hotcell lines NRG

Aanbestedende Dienst:

Nuclear Research and Consultancy Group

Referentie:

2019-258

Omschrijving:

Design, manufacture, delivery and assembly of various Hotcell lines for the micro-production of radioactive starting products and medical end products (GMP) based on Alpha and Beta Isotopes.

Toelichting:**Nr:****Categorie** Eisen en criteria**Betreft** 6.3.2 Core Competencies

1

Vraag

Is it allowed to submit a reference which shows that supplier delivered a hot cell line for a different kind of emitter, which is also used to process Alpha emitters?

Antwoord**Vrijgegeven:** 19-08-2019

In addition to the third core competency we allow contractors to submit a reference which shows that contractor has experience with basic design, detailed engineering, manufacture, delivery and installation of a Hot cell line of at least 2 coupled cells for processing different kinds of emitters, but is also provably used for processing Alpha emitters. In this case additional motivation regarding the corresponding characteristics of the hot cells is required.
