II.1.4) Short description

Offshore wind plays an important role in the energy transition. In order to be able to connect more powerful offshore wind farms and thus bring more energy onshore, TenneT pooled and further developed the best experience from the German 900 MW HVDC and Dutch 700 MW AC grid connection systems in the in-house 2 GW Program. The result is a new approach of connecting future grid connections with a transmission capacity of 2 GW by using 525 kV DC systems.

This prior information is created for companies taking an interest in the upcoming Tender 525 kV DC Cable & Installation of Dutch 2GW Projects planned to start in March 2021.

These companies are requested to register in Negometrix (via the link) to access further information. Information updates may be provided up-and-till the start of this Tender.

note: Special sector company EU-directive 2014/25/EU is applicable.

II.2.4) Description of the procurement:

(nature and quantity of works, supplies or services or indication of needs and requirements)

During 2020 TenneT performed an extensive assessment on multiple possibilities and recently decided for one execution strategy for 2GW projects. Based on this strategy the main scope of works will be divided into three parts and for these parts projects will be clustered, where feasible:

- offshore platform (topside and jacket), HVDC offshore and onshore converters
- civil works, buildings and building services of the land station
- 525 kV DC cable supply and installation offshore and nearshore (onshore cable installation contracting strategy will be decided at a later stage).

This prior information focusses on 525 kV DC cable & installation.

For the Tender 525 kV DC Cable and Installation of Dutch 2GW Projects a separate publication will be made.

It is expected that the tender will consist of lots, to be further determined.
