Question 1	Answer 1
This question is about the hardware devices the end users will be using — is a proposal based on them using solely Apple devices acceptable? If you are looking at purchasing new devices for the users, we would make a proposal based on all these having LiDAR technology, whereas if not then we can formulate a proposal including technology that works on any Apple device.	At this moment all the staff members exclusively use Apple devices for mapping. The external agencies that we use can decide for themselves which version of Ipad they use. Therefore we are looking for an Application that will work on every Apple device and we will not use any LiDAR technology for now
