

The diagram illustrates a complex water treatment and distribution system. It features multiple input streams from different sources, each with its own set of control valves and monitoring instruments. The system includes several pumps for moving water through the process, and a large heat exchanger (CE8330) for thermal management. The layout is organized into functional sections, with a specific area highlighted in red to indicate its relevance to the project scope. The legend provides a key for the various symbols used throughout the diagram.
