The NLD MOD is investigating the technological developments in data transmission infrastructure to cope with the increasing demands on robust and secure connectivity, while at the same time meeting the ever-increasing demand for data transport.

For deployed units, SATCOM is nowadays the preferred system for high bandwidth data transport over longer distances, However, the use of SATCOM systems is not always possible or not the preferred option. Therefore, methods or systems that facilitate SATCOM-offload for deployed units, in particular naval task groups, are required. A Mobile Ad-hoc radio Networks (MANET) can fill in this requirement

With this RFI and questionnaire the NLD MOD explains their interest in the industry's visions and proposals regarding MANET-designs and systems as one of the means of modernizing the military data transmission infrastructure.
