2.1 Procedure

Title:	Vrijwillige Transparantie Flow Cytometer
Description:	The contracting authority, Leiden University Medical Centre (LUMC) has the intention to acquire a BD FACSDiscover™ S8 Cell Sorter in 2024 on behalf of the Flow cytometry Core Facility (FCF). LUMC has the intention to award the contract to BD Biosciences B.V., Vianen, The Netherlands. LUMC will apply the negotiation procedure without publication of a contract notice. LUMC has established that no other competitors than BD Biosciences are, momentarily, able to meet some of the essential technical demands. The BD FACSDiscover™ S8 Cell Sorter is unique as it is able to visualize each sorted cell based providing structural information on each sorted cell, it can visualize the localization of fluorescent markers and can sort cells based on structural or localization parameters. In addition to its unique capabilities, there are other requirements that may not be unique to this instrument. These include: the ability to sort cells based on more than 40 fluorescent parameters simultaneously. T 1

6. Results

Value of all contracts awarded in this notice:	1 Euro
Direct award:	
Justification for direct award:	The contract can be provided only by a particular economic operator because of an absence of competition for technical reasons
Other justification:	The contracting authority, Leiden University Medical Centre (LUMC) has the intention to acquire a BD FACSDiscover™ S8 Cell Sorter in 2024 on behalf of the Flow cytometry Core Facility (FCF). LUMC has the intention to award the contract to BD Biosciences B.V., Vianen, The Netherlands. LUMC will apply the negotiation procedure without publication of a contract notice. LUMC has established that no other competitors than BD Biosciences are, momentarily, able to meet some of the essential technical demands. The BD FACSDiscover™ S8 Cell Sorter is unique as it is able to visualize each sorted cell based providing structural information on each sorted cell, it can visualize the localization of fluorescent markers and can sort cells based on structural or localization parameters. In addition to its unique capabilities, there are other requirements that may not be unique to this instrument. These include: the ability to sort cells based on more than 40 fluorescent parameters simultaneously. The ability to sort cells with > 95% purity at a rate of > 5000 cells per second. The ability to simultaneously sort 6 different cell populations into 6 different collection tubes or to sort into 96-well and 384-well plates. The instrument needs to be able to separate cellular autofluorescence from other fluorescent signals. Although there are several instruments on the market that meet some of the requirements mentioned above, there is no instrument available that meets all requirements.
