

EMVI-BPKV-tabel t.b.v. offerteaanvraag

Bijlage C

Zaaknr.	31195102	
Omschrijving project	Gedrag van bruinvis gerelateerd aan vibro piling	

nr	EMVI-BPKV-criterium	nr	Sub-criterium	Aandachtspunten waarop wordt beoordeeld	Maximale kwaliteitswaarde (€) (MK)	Beoordelingscijfer (BC)	Behaalde kwaliteitswaarde (€)	Doelstelling Opdrachtgever Beschrijving van het doel dat de opdrachtgever met dit criterium wil bereiken	Knock-out bij:
1	Kwaliteitsborging <i>Demonstrable by a written project plan including reference projects. Max. 15 pages A4, Verdana 9 excl. list of references.</i>				575.000		Σsubcriterium 1		
		1.1	Quality of research	The degree in which the project plan accounts for actual roles, responsibilities and contribution of all the project team members; quality and relevance of previous peer-reviewed publications. This can be demonstrated by papers published on these research themes, reports submitted and from CV's / resumes.	385.000		= (BC-6)/4 * MK	Rijkswaterstaat wants to accomplish a good quality projectplan and a good quality of the end product.	5 of lager
		1.2	Quality control of data	The projectplan demonstrates the accuracy in determining the temporary threshold shift (the time between exposure and measuring the threshold shift and the lowest measurable level of threshold shift) and determined with enough repetitions based on literature for comparable research for each hearing frequency tested.	190.000		etc..	Rijkswaterstaat wants to have an adequate accuracy of measurements and results that can be used in the calculations in the cumulative effects of underwater sound for the harbour porpoise in the Dutch 'KEC'.	
2	Aanpak <i>Demonstrable by a written and/or illustrated research proposal. Max. 15 pages A4, Verdana 9 excl. list of references.</i>				320.000		Σsubcriterium 2		
		2.1	Description of the methods	The degree to which the the methods are clear, precise and detailed enough for the commissioner to have confidence in the quality and applicability of the results of the methods; The relevance of risks identified and mitigation measures proposed.	190.000			Rijkswaterstaat would like to know how the contracting party is planning to achieve the results based on the description in the project plan and which expertise in the team will be utilised in what manner and how much time different members will be contributing to the project.	
		2.2	Quality and applicability of the results	The proposal shows how the contractor will ensure that the data collected and results produced can be used to demonstrate a wider applicability of the results to more types of vibropiling sounds than just the vibropiling sounds tested.	130.000			As vibropiling is a reasonable newer form of piling and as the developments in this field continue, Rijkswaterstaat would like to be able to apply the results of this study to all forms of vibropiling. It is not feasible to carry out this study each time a new type of hammer is developed.
