5.1.10 Award criteria

Criterion:

Type:	Quality
	The rheometer will be used to investigate the properties (viscosity, density, melting point, in-situ) of primitive melts that have a very high melting point (>1600 °C, such as Fe-rich metals and primitive silicate melts) and

Description:	/or are unstable under regular atmospheric conditions (carbonate melts, sulphate melts) for research purposes, like studying iron melts and carbonate/sulphate melts that would otherwise oxidize or become unstable in air. Determining these properties is essential for a wide range of research fields, including planetary sciences/earth sciences (volcanism, lava transport), materials science, and direct applications in the sustainability of steel production (properties of metal melts in newly designed, greener furnaces).
Category of award threshold criterion:	Weight (percentage, exact)
Award criterion number:	100
