

Zaaknr.	31201201	
Omschrijving project	Vibro piling harbour porpoise	

nr	EMVI-BPKV-criterium	nr	Sub-criterium	Aandachtspunten waarop wordt beoordeeld	Maximale kwaliteitswaarde (C) (MK)	Beoordelings-cijfer (BC)	Behaalde kwaliteitswaarde (C)	Doelstelling Opdrachtgever Beschrijving van het doel dat de opdrachtgever met dit criterium wil bereiken
1	Quality				915.200		Σsubcriterium 1	
		1.1	Quality of research	Sub-award criterion "Quality of Research" (maximum 5 page in A4 format). The Tenderer describes in a project plan 1) Project planning including different milestones 2) how the project management is arranged 3) project organisation including the degree in which the actual roles (e.g. coordinator, animal care takers, data analysis, behavioural researchers etc.) account for the different responsibilities of the team members, and the contribution of specific team member to the whole project; this can be demonstrated by referring to papers published on these research themes, reports submitted and/or other publications. Next to this, the estimated number of hours invested by the different team members should be specified. Roles that need to be specified are: •Researchers devising the TTS research and analyzing the data to determine the TTS thresholds •Researchers devising the behavioural research and analyzing the data to determine the behavioural effects •Qualified animal caretakers and a registered vet •Project coordinator •Final scientific quality controller of the delivered product.	286.000		= (BC-6)/4 * MK	The contracting authority wants to have insight into the different roles, and that the right people with the required level of skills and knowhow participate in the research and determine research set up, implementation and the analysis of the result.
		1.2	Quality control of data	Sub-award criterion "Quality control of data" (minimum 3 and maximum 10 page in A4 format). The Tenderer describes in a project plan the accuracy of data collection and how this is achieved. The Tenderer describes the degree to which the methods proposed are clear, precise and detailed enough for these Assignment so the Commissioner has confidence in the quality and applicability of the results of the methods. The Tenderer gives a full description of the different steps of the research method, e.g. how to determine with the required accuracy the temporary threshold shift (the time between exposure and measuring the threshold shift and the lowest measurable level of threshold shift). The Tenderer describes the number of repetitions for each set of measurements to determine the TTS and audiograms based on literature for comparable research for each hearing frequency tested.	400.400		etc..	The contracting authority wants to have insight in the methods that the tenderer proposes to use and the purpose of using these methods and the implemented checks to ensure the quality of data.
		1.3	Quality and applicability of the results	Sub-award criterion "Quality and applicability of the results" (maximum 2 page in A4 format). The Tenderer describes in a proposal how they will ensure that the data collected and results produced can be used to achieve the goals of this project and demonstrate a wider applicability of the results to more types of vibro piling sounds than just the vibro piling sounds tested.	228.800			The contracting authority wants to be sure that the proposed researches will be applicable in the (possible) development of vibro piling.
2	Risks				171.600		Σsubcriterium 2	
		2.1	Description of the risks	Award criterion "Description of the risks" (maximum 3 page in A4 format). The Tenderer describes in the project plan the relevance of risks identified and mitigation measures to manage these risks. Descriptions of the risks and risk management measures as mentioned in, but not limited to, the program of requirements.	171.600			The contracting authority wants to be sure that the proposed researches will be applicable in the (possible) development of vibro piling.
3	Sustainability				57.200		Σsubcriterium 3	
		3.1	Sustainability	Award criterion "Sustainability" (maximum 1 page in A4 format). The Tenderer describes in an action plan which measures will be taken into account and contribute to 1) Energy & Climate, 2) Environment & Living Environment, 3) Wellbeing & Health, 4) Social return when carrying out this Assignment.	57.200			The contracting authority wants to have insight in how the tenderer proposes to apport to sustainability.
