Overview of integration with external systems External system	Used in	Usage	Implementation
LUMC Webservices	Albinusnet	Webpages showing data from external LUMC systems	Data is obtained from SOAP services provided by LUMC
PeopleSoft (CRM)	Albinusnet (mostly)	Various usages of basic employee data (name, telephone, email and department)	Data dump from PeopleSoft to a database in the LUMC network, periodic import of data from this database into custom tables in the Optimizely CMS database.
Converis	Albinusnet	Event information for the Albinusnet Agenda	An XML file is pushed from the LUMC network to an endpoint in the web app, after which the data is converted to webpages in Albinusnet.
Recruitee (ATS)	LUMC.NL (mostly)	Generation of web pages in the CMS for the job vacancies	Data is read from the API endpoints provided by Recuitee, this data is subsequently converted in the

			web app to CMS pages
Zenya (Document management)	LUMC.NL	Generation of web pages in the CMS for patient leaflets	Data is read from the API endpoints provided by Zenya and subsequently converted into web pages in the web app to CMS pages
ADFS	Albinusnet, LUMC.NL	Single sign-on in the Albinusnet intranet, user rights in the CMS backend	Connection with federatie.lumc.nl
