version 2026

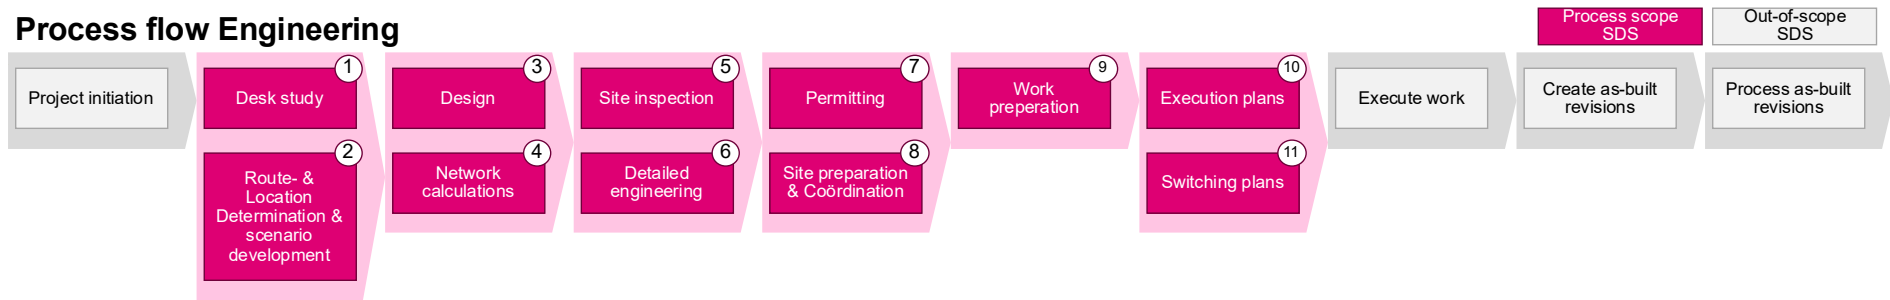

EXPLANATION OF THE PROCESS AND TOOLING OVERVIEW

The figure below provides a schematic, high-level representation of the engineering process scope, the current IT tooling used throughout the process, and the envisioned positioning of the Smart Design Solution (SDS) within the future application landscape. Its purpose is to provide context and illustrate the intended direction, scope, and boundaries of the solution.

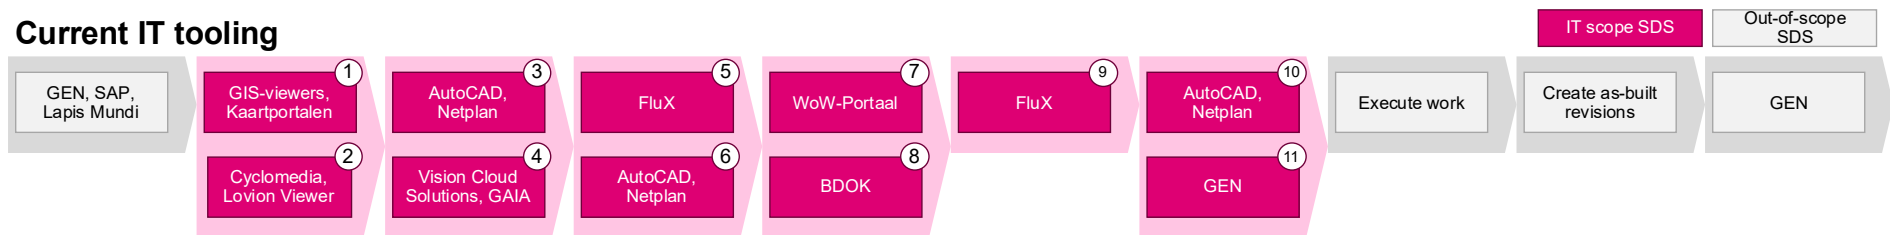

The process steps, activities, systems, and integrations shown are indicative and not exhaustive. The overview has been simplified for readability and does not represent all process variants, exceptions, interfaces, data flows, or organizational responsibilities. As such, it should not be interpreted as a complete or detailed representation of the current or future-state architecture.

No rights may be derived from this overview. In the event of any discrepancies between this illustration and the formal procurement documentation, the procurement documents, including the Draft Requirements and any subsequent clarification documents, shall prevail.
