Vraag en antwoord

Ref.nr. 2
Onderwerp: Selectie criteria

Vraag:

Hoe moeten punt 5 van de selectie criteria lezen: "

"5. After eight (8) years of use of your sensor by the KNMI, drift appears to occur at 50% of the temperature sensors in the KNMI sensor pool. This subset needs to be significantly adjusted annually. The KNMI will inform you about this issue via the original contact person/expert, but this person no longer appears to be working for you.

What happens? What is your advice to the KNMI? This section falls under the assessment aspect "Support".

Wordt hiermee 50% van de geleverde sensoren bedoeld of 50% van de meetwaarde?

Antwoord:

The 50% in point 5 refers to the number of temperature sensors supplied, not to the measured value. In this scenario, half of the sensors supplied to the KNMI sensor pool show drift and need significant annual adjustment. The question asks how you would handle this situation, including the loss of the original contact person, and what you would advise the KNMI.

Onderwerp: Technische specificaties

Vraag:

In de huidige documenten zien we geen technische specificatie vermeld waaraan de instrumenten moet voldoen.

In the current documents, we do not see any technical specification that instruments must comply

with.

Antwoord:

The contracting authority has chosen this procedure in order to arrive at a short list of suppliers. From the short list, we want to work on a sustainable relationship in which the technical specifications are part of your final registration at a later stage. In short, the contracting authority firstly wishes to learn better as an organization before taking the next steps in this tender.

Selection criteria

Vraag:

"We have looked into the documents which should be delivered for the Phase 1 Selection phase. We guess that these are all the documents required, as stated in Table 4.2 under the name of "Independent Request to Participate".

First of all, the table in Chapter 4.2 of the "Selection Guidelines" document states that we need to fill in a document named "Model Reference Commands". Is this the same document as "Appendix 3 – Model Reference Assignments"? If not what is the right document?

Regarding this "Model Reference Assignments" document, do we need to ask a relation to be a reference for us? If so, can we have two different relations who could reference us as proof that we have delivered more than 132 temperature sensors to them in the last 3 years? And another relation who we supply sensors to in the meteorological field, because these are probably going to be different relations.

Also, in the table in Chapter 4.2, it says "Request to Participate" to do an elaboration of the case (4.1.1), but there are no crosses behind this. So, do we need to make this case or not? Because it does say "Request to participate"

Antwoord:

Request 1: Your assumption is correct; here, the contracting authority is referring to the Model Reference Assignments (Appendix 3).

Request 2: As an organization, you submit a reference project (assignment) that meets both requirements. You do not need to ask your client for a signature. You are allowed to submit multiple references, with a maximum of 3 references, to satisfy Core Competence 2.

Request 3: To clarify you have to fill-in the case if you rely on the capacities of third parties, you have indicated this in the ESPD.

Selection criteria

Vraag:

Do we need to provide evidence for temperature sensors with a specific specification? Can we also provide evidence from other sensors to qualify?

Antwoord:

It is not clear to us which part of the document this question refers to.

Could you please specify your request, so that we can answer the question accurately?
