2. Procedure

2.1 Procedure

Title:	Monobloc wielen voor de VIRM ICM en DDZ series
Description:	NS intends to award a contract for the continued supply of monoblock wheels for its VIRM, DDZ and ICM rolling stock through a negotiated procedure without prior publication. The contract concerns additional supplies of monoblock wheels of the same make and specification as those supplied under the original contract. The award is based on Article 3.37 of the Dutch Public Procurement Act (Aanbestedingswet), as replacing the current supplier would introduce unacceptable technical risks affecting the performance, reliability, and maintainability of the rolling stock. 16.700 wielen
Procedure identifier:	6a577c92-1dfc-45d9-8abb-f0b914763415
Type of procedure:	Negotiated without prior call for competition

6. Results

Maximum value of the framework agreements in this notice:	18 000 000 Euro
Direct award:	
Justification for direct award:	Partial replacement or extension of existing supplies or installations by the original supplier ordered under the strict conditions stated in the Directive
Other justification:	NS intends to award a contract for the continued supply of monoblock wheels for its VIRM, DDZ and ICM rolling stock through a negotiated procedure without prior publication. The contract concerns additional supplies of monoblock wheels of the same make and specification as those supplied under the original contract. The award is based on Article 3.37 of the Dutch Public Procurement Act (Aanbestedingswet), as replacing the current supplier would introduce unacceptable technical risks affecting the performance, reliability, and maintainability of the rolling stock. Technical Justification Monoblock wheels are a safety-critical component that directly influences the reliability, service life, maintenance requirements, and overall performance of the rolling stock. A recently completed study assessing wheel performance across the NS fleet has confirmed that replacing the current wheel design with monoblock wheels from a different manufacturer would create a significant risk of deterioration in fleet performance. The study demonstrates, among other findings, that the existing market standard in technical specifications (TSI's) permit a degree of

variability that exceeds the tolerances necessary for NS to achieve the wheel performance required to maintain current operational standards. As a result, introducing wheels from an alternative supplier would create a substantial risk of accelerated wear, increased life-cycle costs, additional maintenance activities, and reduced fleet availability. Such consequences would adversely affect the reliability and efficiency of passenger services and could not be accepted by NS.
