

#	Page / chapter / paragraph	Question	Answer
1	N/A	Can companies from Outside Netherlands can apply for this? (like, from India or Canada)	Kadaster has no restrictions at this stage. The market survey is executed to gain insight into which technology is available and what companies offer this. Both companies residing in the Netherlands and abroad can reply to the survey.
2	N/A	Whether we need to come over there for meetings?	There are no meetings planned at this stage (market survey).
3	N/A	Can we perform the tasks (related to RFP) outside Netherlands? (like, from India or Canada)?	Please note that this is a market survey (RFI), not a RFP. We only expect you to answer the questions of the market survey, as specified in the Appendices of the document "Market survey automatic field sketches reading.pdf".
4	N/A	Can we submit the proposals via email?	Yes
5	N/A	Does the Kadaster has a timeline or budget limit for the project?	The project timeline is related to the feasibility of the (automatic) vectorization of the scanned map drawings. A couple of years is expected as the needed period for the project's completion. The budget of the project has not yet been established. At this moment, Kadaster is focused on the acquisition of information regarding the available technologies.
6	N/A	Would the outcome be a general product or a software library that needs to be integrated with Kadaster's workflow?	The main restriction is that the delivered data from the product will be used afterwards in a calculation program. A proposed calculation program is mentioned in the Market Survey package and a document with the desired structure of the data <u>for that program</u> , is given as an example.
