#### Background

The Dutch government has decided to develop large-scale offshore wind farms as stated in the so-called roadmap 'Offshore wind' dated 24.09.2014 . The government policy for the period till 2023 foresees the realization of three wind areas (Borssele, Hollandse Kust Zuid and Hollandse Kust Noord) with 3,500 MW of additional installed capacity in 2023. Afterwards it is expected that additional large-scale offshore windfarms will be realized in areas of the North Sea where oil & gas platforms are located.

In the North Sea oil & gas platforms are operated as well. Both oil & gas platforms and offshore windfarms require access by helicopter. The Wind Farm Zones Hollandse Kust (zuid) and Hollandse Kust (noord) are close to operational oil & gas platforms and crossed by existing obstacle free 5 NM zones for helicopter operations. A study on guidelines for new obstacle-free zones for helicopter flights to oil & gas platforms in the vicinity of future offshore wind farms is needed to ensure safe flight operations and an efficient use of the available areas for offshore windfarms.

#### Purpose of this notification

The purpose of this notification is to determine which parties are willing and able to carry out a study on guidelines for obstacle-free zones for helicopter operations around oil & gas platforms.

#### Suitability requirements

Supplier should have

- experience with helicopter flight operations
- experience with designing helicopter routes from main land to offshore platforms in the North Sea;
- in sight in national and international aviation safety rules
- in sight in industry standards and procedures used by helicopter pilots
- experience with working with or advising Netherlands aviation authorities
- experience with state of the art helicopter technologies
